Overview

The NLG 101360 Ascent Bucket™ is a market leading drop prevention bucket. Designed for demanding roles, it will keep your gear securely stored and easily accessible when working at height. The Ascent Bucket™ has a compact design but will hold up to 100kg of rope, climbing equipment, tools or materials. Easily organise and manage the contents with the NLG Bucket Organiser (sold separately). Dropped objects can cause serious injury to those around you or damage to equipment and vehicles. As such, it is vitally important to make sure your equipment is safely secured.

The Ascent Bucket™ is made from Megatex™, a highly durable material that is up to 7 times more abrasion-resistant than premium military-grade fabrics. The bucket is secured with a water-resistant roll-top closure and built-in compression straps. This keeps the contents secure and helps to prevent drops, even when the bucket is inverted. It has a load-rated lifting handle built-in, so it can easily be hauled when loaded to full capacity. It also features coloured coded loops on the base and top to help manage your main and back up ropes. Six load-rated anchor points inside the bucket make it quick and easy to securely tether your tools. Maximum load of 100kg (220lbs).
