Overview

The NLG 101400 Aero Pouch is designed for anyone routinely using small parts when working at height. For example, it will safely store nuts, bolts, screws or nails and other small components. Dropped objects can cause serious injury to those around you or damage to equipment and vehicles. As such, it is vitally important to make sure your equipment is safely secured.

The Aero Small Parts Pouch features an innovative closure system. This allows easy access to it's contents, however the pouch will automatically close if it is inverted. This helps to prevent the contents from spilling out in the event of a fall. Two external D-Ring connectors allow the secure attachment of lanyards or tools. The pouch has universal Quick Connect buckles on the back, so it can be clipped to a belt, harness or rail.
