Overview

The NLG 101421 Linesman Bag is a specialist tool tethering bag designed for industrial climbers working in the most difficult environments. The bag will keep your tools close, easily accessible and securely stored when working at height. Dropped objects can cause serious injury to those around you or damage to equipment and vehicles. As such, it is vitally important to make sure your equipment is safely secured.

The Linesman Bag features a multi-pocket design with an innovative closure system. This allows easy access to the contents while preventing them from spilling out in the event of a fall. Two large and two small pockets allows you to segregate commonly used tools and important equipment. Four external tool holders and eight rings provide plenty of load-rated attachment points for lanyards. The bag has universal Quick Connect™ clips on the back, so it can be clipped to a work belt, safety harness, scaffolding or hand rail. Maximum load of 30kg (66lbs).
