Overview

The NLG 101423 MEWP Bag is specifically designed for working on mobile elevated work platforms. It keeps your tools close, easily accessible and fully secured when working at height, and is ideal for shared workspaces. Dropped objects can cause serious injury to those around you or damage to equipment and vehicles. As such, it is vitally important to make sure your equipment is safely secured.

The MEWP Bag is tough, durable and versatile, with a large main compartment divided into three separate pockets. Combined with two small pockets, this gives you plenty of options to organise your tools. It also features six load-rated internal attachment rings and two external attachment rings for tool tethering. The bag has TriLock™ Velcro mounting straps, so it can be quickly and easily connected to any approved rail on a MEWP, cherry picker, scissor lift or scaffolding. Maximum load of 30kg (66lbs).
