Overview

The NLG 101479 Orange Tether Tape is designed for tools without a drilled hole, enclosed handle or other manufactured tether point. Use the Tether Tape with NLG's D-Rings or Tether Chokes to quickly add a load-rated tether point in seconds. Dropped objects can cause serious injury to those around you or damage to equipment and vehicles. As such, it is vitally important to make sure your equipment is safely secured.

The Orange Tether Tape provides a contrasting colour to help differentiate equipment and aid in visual inspections. It is made with innovative self-fusing silicone technology, with no adhesives and a fibreglass reinforcement mesh for added strength. The tape is activated by stretching, so no heat source or other equipment is required. It fully bonds to itself within 24 hours at room temperature, but it is tested and certified for immediate use. As no adhesives are used, it can be cut away after use and also leaves no residue or marks. A roll of Tether Tape will secure 10 tools on average. Part of NLG's Instant Tether System™. Maximum load 5kg (11lbs).
