OverviewSpecification

The 3M 9320+ Aura Particulate Respirator is a reliable, easy to use P2 rated disposable mask. The mask has an advanced three panel design and low breathing resistance, so it is comfortable to wear and use. It can also be folded flat, so it is easier to carry around and store than traditional cup shaped respirators. Supplied in a box of 20 individually sealed masks.

The innovative three panel design allows for greater facial movement. The sculpted nose panel follows the contours of the face, creating an effective seal and improving compatibility with eyewear. The embossed top panel also reduces eyewear fogging. The respirators are individually packed in hygienic wrapping to protect against contamination.

The 3M 9320+ offers protection against a wide range of dusts and mists, so it can be used in a wide variety of clinical and industrial roles.

- **FFP2** - protects against moderate levels of hazardous fine dusts, water and oil based mists or aerosols and biological agents of risk group 2 in concentrations of up to 10 x WEL.
- **NR** - non reusable. Disposable masks suitable for single shift use only.
- **D** - these filters have passed the Dolomite clogging test, giving the user better breathing resistance.
