Overview

Specification

The 3M 6000 Series Reusable Full Face Respirator combines high levels of respiratory protection with a full face visor. Uses 3M's bayonet-style connection to fit a wide range of different filters, so it can be adapted to different needs. For example, workplace protection against gases, vapours or particulates.

The 6000 series respirators are made from a soft silicone material that is both light and comfortable to wear, even for extended use. The mask has a twin-filter design, so it has an even distribution of weight and a clear field of vision in use. The adjustable head harness keeps the mask stable while also ensuring a secure fit. The visor is made from tough, impact-resistant polycarbonate for eye protection. The respirator can also be combined with the 3M's S-200+ Supplied Air Regulator. Tested and certified to EN 136:1998 and EN 166:2001 European standards.
