Overview

Specification

The Skytec Ninja X4 Cut Protection Gloves are light, comfortable work gloves that provide cut level B protection. The gloves provide superb grip in both wet and dry conditions, making them ideal for a wide range of industrial roles. For example, handling objects with sharp or jagged edges, glass and glazing, sheet metal work, mechanical engineering and packaging.

The X4 gloves have a machine knitted lining made from blended synthetic yarns with an ergonomic shape to help reduce hand fatigue. The lining is extremely durable yet flexible, so it provides excellent manual dexterity. The palm and fingers of the glove have a tough, abrasion resistant bi-polymer coating. An elasticated wrist ensures a secure fit. The gloves are treated with Actifresh to kill bacteria and maintain freshness. Tested and certified to EN 388:2016 European standards.
