Overview

Specification

The DuPont™ Tychem® 6000 F Hooded Coverall With Socks are lightweight chemical protection overalls with socks and boot flaps attached. Tychem® 6000 F disposable garments provide reliable protection against a wide range of organic chemicals, highly concentrated inorganic chemicals and biological hazards.

Tychem® protective clothing meets the EN 14126:2003 requirements for protection against biological hazards in the highest performance class. This makes Tychem® garments suitable for a broad range of high risk roles. For example, they can be used for chemical spill clean-up, emergency services, military and petrochemical applications. They also meet the requirement for EN 1073-2 (protection against contaminated radioactive particles and liquid hazards). These disposable garments are designed to offer maximum protection and ease of movement for the wearer when completing difficult tasks.

The Tyvek® 6000 F coveralls feature an elasticated hood with self-adhesive chin flap, elasticated cuffs and ankles to provide a secure, comfortable fit. The coveralls also have a self-adhesive double zip flap for additional protection. This garment also comes with integrated socks, boot flaps and thumb loops. For safety reasons, the use of the thumb loops is only recommended when double gloves are worn.
