Overview

The Honeywell Vistamax VNC21 Safety Goggles are high performance, unvented anti-fog goggles. Ideal for use in most hot or humid working environments and suitable for wearing over prescription glasses. The goggles have high tech styling and a no-vent frame, which provides excellent protection against dust, particles and splashes. Conforms to EN 166:2001.

The Vistamax goggles feature an innovative anti-fog twin lens system, providing three times better performance than a standard non-mist goggle. The front lens is scratch and chemical resistant acetate, while the rear lens is impact resistant polycarbonate. The goggle feature a thermal bridge with aluminium condenser, which helps prevent fogging.
